

PDF-A-go-go

An embeddable PDF viewer for the web

Add one script tag and a `<div>` to any HTML page.

~550 kB

Transfer size

3 lines

To embed

~8 MB

Memory usage

The Problem & The Fix

Why PDF-A-go-go exists

The Problem

- Browser `<iframe>` embeds look different everywhere — no UI control
- Raw PDF.js requires 200+ lines of setup code
- Most viewer libraries require React or a paid hosted service
- If you just want search, zoom, and keyboard nav — options are thin

The Fix — 3 Lines of HTML

```
<link rel="stylesheet"
      href="...pdf-a-go-go.css" />

<script defer
      src="...pdf-a-go-go.js"></script>

<div class="pdfagogo-container"
      data-pdf-url="/your-doc.pdf"></div>
```

No init code. No build step. It just works.

How It Works

Tile-Based Rendering

Pages are divided into tiles.
Only visible ones render.

Adaptive Resolution

Resolution matches zoom level.
~8 MB vs ~80 MB typical.

LRU Cache

Old tiles get evicted.
Memory stays bounded.

Features at a Glance

Everything you need, nothing you don't

- **Full-Text Search**
Built-in search across the entire document

- **Pinch-to-Zoom**
Touch-friendly zoom with mouse wheel support

- **Keyboard Accessible**
Full keyboard navigation and shortcuts

- **Deep Linking**
Link to specific pages with #pdf-page-N

- **Fullscreen Mode**
Immersive reading with one click

- **Themeable**
CSS custom properties for full styling control

- **Multiple Instances**
Many viewers on one page, each independent

- **Dark Theme**
Built-in dark mode, or create your own

How It Compares

	PDF-A-go-go	EmbedPDF	Raw PDF.js	<iframe>
Lines to embed	3	3	200+	1
Framework required	✗	✗	✗	✗
Pinch-to-zoom	✓	✓	DIY	Browser
Full-text search	✓	✓	DIY	Varies
Memory efficient	~8 MB	?	~80 MB	N/A
Keyboard accessible	✓	✓	DIY	✗
Themeable	CSS vars	Light/dark	DIY	✗
Deep linking	✓	✗	DIY	✗
Transfer size	~550 kB	~2.3 MB	~550 kB	0
